Tek-LCD 7800B-0L1
Explosion-Proof Level Meter

Instruction Manual
Disclaimer

The information contained in this document is subject to change without notice. Tek-Trol makes no representations or warranties with respect to the contents hereof; and specifically disclaims any implied warranties of merchantability or fitness for a particular purpose.

CAUTION: Read complete instructions prior to installation and operation of the meter.	**WARNING**: Risk of electric shock or personal injury.
WARNINGS	• This product is not recommended for life support applications or applications where malfunctioning could result in personal injury or property loss. Anyone using this product for such applications does so at his/her own risk. Tek-Trol LLC shall not be held liable for damages resulting from such improper use. • Failure to follow installation guidelines could result in death or serious injury. Make sure only qualified personnel perform the installation. • Never remove the meter cover in explosive environments when the circuit is live. • Cover must be fully engaged to meet flameproof/explosion-proof requirements.

Limited Warranty

Tek-Trol LLC warrants this product against defects in material or workmanship for the specified period under "Specifications" from the date of shipment from the factory. Tek-Trol's liability under this limited warranty shall not exceed the purchase value, repair, or replacement of the defective unit.

Registered Trademarks

All trademarks mentioned in this document are the property of their respective owners.

INTRODUCTION

The Tek-LCD 7800B-0L1 is a rugged, explosion-proof loop-powered meter fully featured for demanding applications in hazardous areas or in the harshest environmental conditions. The bar graph representation of the process input is perfect for level applications and allows for quick assessment of current conditions. The meter derives all of its power from the 4-20 mA loop. It is programmed using the four through-glass buttons, without removing the cover, and can be scaled with or without a calibration signal. The numeric display will read up to 99999 and the alphanumeric display can be programmed to show any combination of numbers and letters up to seven characters long for use as engineering units, the process identification tag or a display for the calculated volume when using for level applications. The backlight lets you see the display under any lighting condition and can be powered from either the 4-20 mA loop or from a separate DC power supply.

The enclosure is provided with two threaded conduit holes and integrated pipe or wall mounting slotted flanges.

ORDERING INFORMATION

Model Number	Reorder Number	Description
PD6800-0L1-TK	Tek-LCD 7800B-0L1	Explosion-Proof Loop-Powered Level Meter with Bargraph

Accessories

Model Number	Reorder Number	Description
PDA0002-TK	Tek-LCD 7800B-002	3/4" M-NPT to 1/2" F-NPT Approved Reducer
PDA6846-TK	Tek-LCD 7800A-6846	Steel Pipe Mounting Kit
PDA6846-SS-TK	Tek-LCD 7800A-6846SS	Stainless Steel Pipe Mounting Kit

Manufactured by Precision Digital Corporation
233 South St, Hopkinton MA 01748

Table of Contents

Table of Figures

SPECIFICATIONS

Except where noted all specifications apply to operation at +25°C.

General

DISPLAY	Five digits (-9999 to 99999)	0.60" (15.2 mm) high, 7-segment, automatic lead zero blanking.
	Seven characters	0.4" (10.2 mm) high, 14-segment.
	Symbols	Bar Graph which displays process input from 0-100% of scaled value.
	Backlight	White
DISPLAY UPDATE RATE	Ambient > -25°C: 2 Updates/Second Ambient < -25°C: 1 Update/5 Seconds	
DISPLAY OVERRANGE	Display flashes 99999	
DISPLAY UNDERRANGE	Display flashes -9999	
PROGRAMMING METHOD	Four through-glass buttons when cover is installed. Four internal pushbuttons when cover is removed.	
NOISE FILTER	Programmable LO, n Ed, H I, or OFF	
RECALIBRATION	Recalibration is recommended at least every 12 months.	
MAX/MIN DISPLAY	Max/Min readings reached by the process are stored until reset by the user or until power to the meter is turned off.	
PASSWORD	Programmable password restricts modification of programmed settings.	
NON-VOLATILE MEMORY	All programmed settings are stored in non-volatile memory for a minimum of ten years if power is lost.	
NORMAL MODE REJECTION	64 dB at 50/60 Hz	
ENVIRONMENTAL	Operating temperature range: -40 to 75°C Storage temperature range: -40 to 75°C Relative humidity: 0 to 90% non-condensing	
CONNECTIONS	Screw terminals accept 12 to 22 AWG wire	
ENCLOSURE	Explosion-proof die cast aluminum with glass window, corrosion resistant epoxy coating, color: blue. NEMA 4X, 7, & 9, IP68. Two ¾" NPT threaded conduit openings. One ¾" NPT metal conduit/stopping plug with 12 mm hex key fitting installed.	
MOUNTING	May be mounted directly to conduit. Two slotted flanges for wall mounting or NPS 1½" to 2½" or DN 40 to 65 mm pipe mounting. See MOUNTING DIMENSIONS on page 43.	
OVERALL DIMENSIONS	5.65" x 5.25" x 4.86" (W x H x D) (144 mm x 133 mm x 124 mm)	
WEIGHT	5.00 lbs (80 oz, 2.27 kg)	

WARRANTY	3 years parts and labor

Input

ACCURACY	±0.03% of calibrated span ±1 count, square root & programmable exponent accuracy range: 10-100% of calibrated span.
MULTI-POINT LINEARIZATION	2 to 32 points
PROGRAMMABLE EXPONENT	1.0001 to 2.9999
LOW FLOW CUT-OFF	0-99999 (0 disables cutoff function)
TEMPERATURE DRIFT	50 PPM/°C from -40 to 75°C ambient
DECIMAL POINT	User selectable decimal point
MINIMUM SPAN	Input 1 & Input 2: 0.10 mA

CALIBRATION RANGE	An *Error* message will appear if input 1 and input 2 signals are too close together.	
	Input Range	**Minimum Span Input 1 & Input 2**
	4-20 mA	0.10 mA

MAXIMUM VOLTAGE DROP	**Without Backlight or with Externally-Powered (DC Powered) Backlight**	**With Loop-Powered Backlight**
	3.0 VDC @ 20 mA	6.0 VDC @ 20 mA
EQUIVALENT RESISTANCE	150 Ω @ 20 mA	300 Ω @ 20 mA

EXTERNALLY POWERED BACKLIGHT	**Voltage Range:**	**Maximum Power**			
	9-36 VDC	**9 VDC**	**12 VDC**	**24 VDC**	**36 VDC**
		0.2 W	0.25 W	0.5 W	0.75 W

INPUT OVERLOAD	Over current protection to 2 A max.
HART TRANSPARENCY	Analog input will not interfere with existing HART communications on the wired 4-20 mA signal

Open Collector Output

RATING	Isolated open collector, 30 VDC @ 150 mA max.
ALARM OUTPUT	Assign to level or volume for high or low alarm trip point.
DEADBAND	0-100% FS, user selectable
ACKNOWLEDGE	Front panel ENTER button and external RESET terminals re-sets output and screen indication.

Special Conditions for Safe Use:
Use suitably certified and dimensioned cable entry device and/or plug. The equipment shall be installed such that the supply cable is protected from mechanical damage. The cable shall not be subjected to tension or torque. If the cable is to be terminated within an explosive atmosphere, then appropriate protection of the free end of the cable shall be provided.

Year of Construction
This information is contained within the serial number with the first four digits representing the year and month in the YYMM format.

For European Community: The Tek-LCD 7800B-0L1 must be installed in accordance with the ATEX directive 94/9/EC, and the product certificate Sira 10ATEX1116X.

Electromagnetic Compatibility

EMISSIONS	EN 61326:2013 Safety requirements for measurement, control, and laboratory use – Industrial Group 1 Class A ISM emissions requirements
Radiated Emissions	Class A
IMMUNITY	EN 61326:2013 Safety requirements for measurement, control, and laboratory use

Telco Surge	±1 kV
CRFI	3 V, 0.15-80 MHz, 1 kHz 80% AM

SAFETY INFORMATION

WARNINGS

- Read complete instructions prior to installation and operation of the meter.

- Installation and service should be performed only by trained service personnel. Service requiring replacement of internal components must be performed at the factory.

- Disconnect from supply before opening enclosure. Keep cover tight while circuits are alive. Conduit seals must be installed within 18" (450mm) of the enclosure.

- Verify that the operating atmosphere of the meter is consistent with the appropriate hazardous locations certifications.

- If the meter is installed in a high voltage environment and a fault or installation error occurs, high voltage may be present on any lead

.

INSTALLATION

For Installation in USA: The Tek-LCD 7800B-0L1 must be installed in accordance with the National Electrical Code (NEC) NFPA 70.

For Installation in Canada: The Tek-LCD 7800B-0L1 must be installed in accordance with the Canadian Electrical Code CSA 22.1. All input circuits must be derived from a CSA approved Class 2 source.

For European Community: The Tek-LCD 7800B-0L1 must be installed in accordance with the ATEX directive 94/9/EC and the product certificate Sira 10ATEX1116X.

⚠ **WARNING**	Disconnect from supply before opening enclosure. Keep cover tight while circuits are alive. Conduit seals must be installed within 18" (450mm) of the enclosure.

Wiring connectors are accessed by opening the enclosure. To access electrical connectors, remove the 2 captive screws, then disconnect the ribbon cable from the display module and set the display module aside.

Unpacking

Remove the meter from box. Inspect the packaging and contents for damage. Report damages, if any, to the carrier.

If any part is missing or the meter malfunctions, please contact your supplier or the factory for assistance.

Pre-Installed Conduit/Stopping Plug

The Tek-LCD 7800B-0L1 is supplied with one pre-installed conduit plug for installations that do not require the use of both conduit entries. The conduit/stopping plug includes an internal hexagonal socket recess for removal. The pre-installed plug and installation is included in all hazardous area approvals of the Tek-LCD 7800B-0L1.

⚠ **WARNING**	In hazardous areas, conduit and conduit/stopping plugs require the application of non-setting (solvent free) thread sealant. It is critical that all relevant hazardous area guidelines be followed for the installation or replacement of conduit or plugs.

Mounting

The Tek-LCD 7800B-0L1 has two slotted mounting flanges that may be used for pipe mounting or wall mounting. Alternatively, the unit may be supported by the conduit using the conduit holes provided.

Refer to *Mounting Dimensions*, page 43 for details.

⚠ **WARNING**   Do not attempt to loosen or remove flange bolts while the meter is in service.

Cover Jam Screw

The cover jam screw should be properly installed once the meter has been wired and tested in a safe environment. The cover jam screw is intended to prevent the removal of the meter cover in a flameproof environment without the use of tools. Using a M2 hex wrench, turn the screw clockwise until the screw contacts the meter. Turn the screw an additional 1/4 to 1/2 turn to secure the cover. Caution: Excess torque may damage the threads and/or wrench.

Connections

⚠

WARNINGS

- Static electricity can damage sensitive components.
- Observe safe handling precautions for static-sensitive components.
- Use proper grounding procedures/codes.
- If the meter is installed in a high voltage environment and a fault or installation error occurs, high voltage may be present on any lead or terminal.

To access the connectors, remove the enclosure cover and unscrew the two captive screws that fasten the display module. Disconnect the ribbon cable and remove the display module. Signal connections are made to a four-terminal connector in the base of the enclosure. Grounding connections are made to the two ground screws provided on the base – one internal and one external.

Connections (continued)

SIGNAL +   4-20 mA signal input positive terminal connection

SIGNAL -   4-20 mA signal return/negative terminal connection when not using loop powered backlight.

BACKLIGHT +   +9-36 VDC when powering backlight from external supply.

BACKLIGHT -   4-20 mA signal return/negative terminal when using the installed loop powered backlight or ground/negative when powering backlight from external supply.

OUTPUT+   NPN open collector output positive.

OUTPUT-   NPN open collector output negative.

RESET +   Contact closure alarm acknowledge pull up to 3 VDC.

RESET-   Contact closure alarm acknowledge ground/negative.

Refer to Figure 1 for terminal positions.

⚠ **WARNING**	Observe all safety regulations. Electrical wiring should be performed in accordance with all agency requirements and applicable national, state, and local codes to prevent damage to the meter and ensure personnel safety.
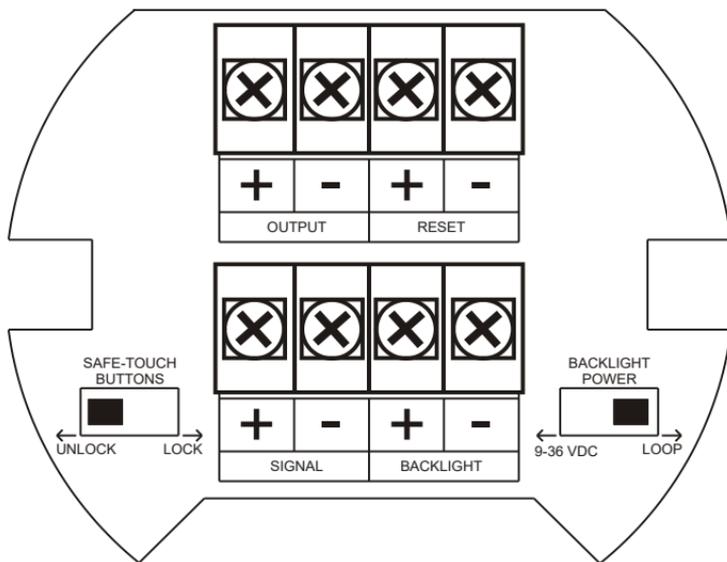

Figure 1. Connector Board

Connections & Wiring Diagrams

Signal connections are made to a four-terminal connector mounted in the base of the enclosure. The enclosure also provides one internal and one external earth grounding screw. For installations without backlight, only the two signal terminals are connected. The 4-20 mA input with no backlight has a maximum voltage drop of 3 V and is wired as shown in Figure 2. The loop-powered backlight configuration requires a total maximum voltage drop of 6 V. The backlight is recommended for dim lighting conditions and is enabled when wired as shown in Figure 3 or Figure 4.
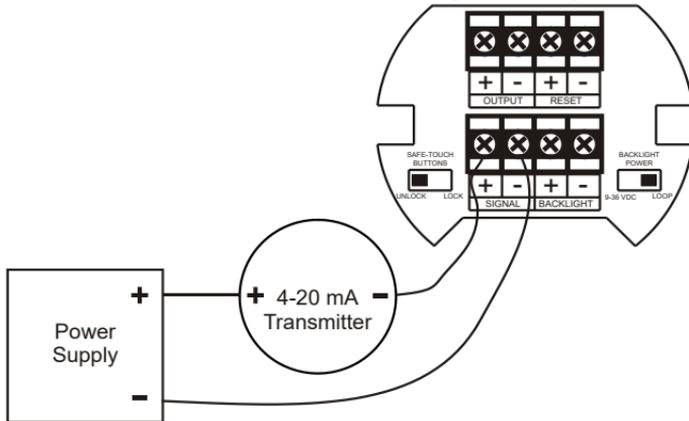

Figure 2. Connections without Backlight
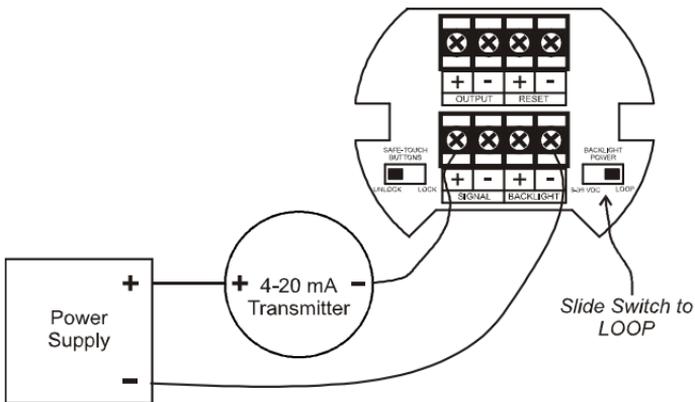

Figure 3. Connections with Loop-Powered Backlight
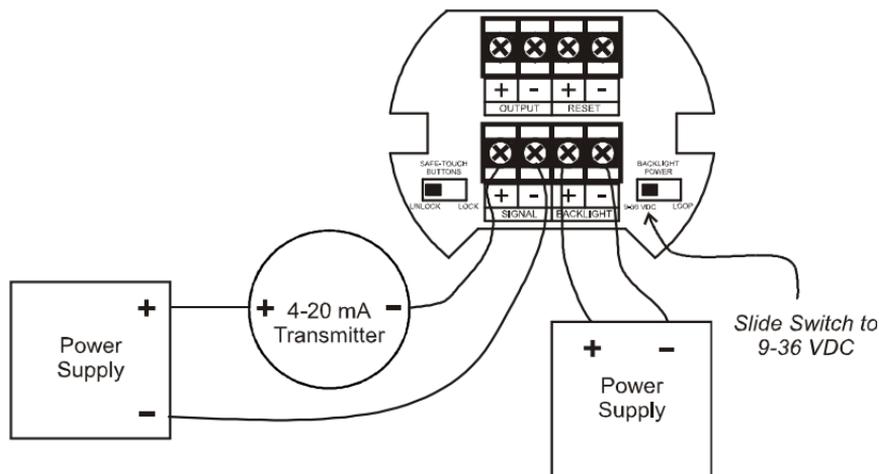

Figure 4. Connections with Externally-Powered Backlight

It is possible to use the same transmitter (signal loop) power supply for the externally powered backlight. The backlight circuit will draw 25 mA in addition to the loop circuit.

External Acknowledge Connection

External acknowledge connections are made to two terminals labeled RESET. Connect to a contact closure source such as a relay or a pushbutton as shown in

Figure 5.
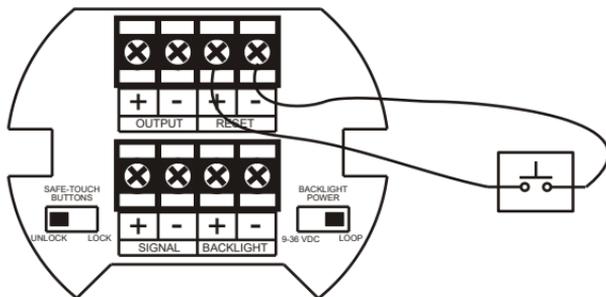

Figure 5. External Alarm Reset/Acknowledge Connections

Open Collector Output Connections

Output connections are made to two terminals labeled OUTPUT. Connect to an input device such as alarm indicator as shown in Figure 6, or drive a relay as shown in Figure 7.

⚠ WARNING	To avoid damaging the Tek-LCD 7800B-0L1's amplifying components, use care not to wire incorrectly or exceed output ratings. A diode, such as 1N4000 series, will provide protection from relay transients.
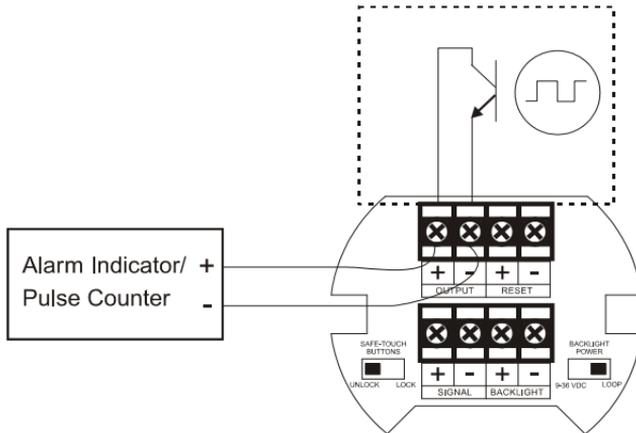

Figure 6. Connection to Device with Internal Pull-Up
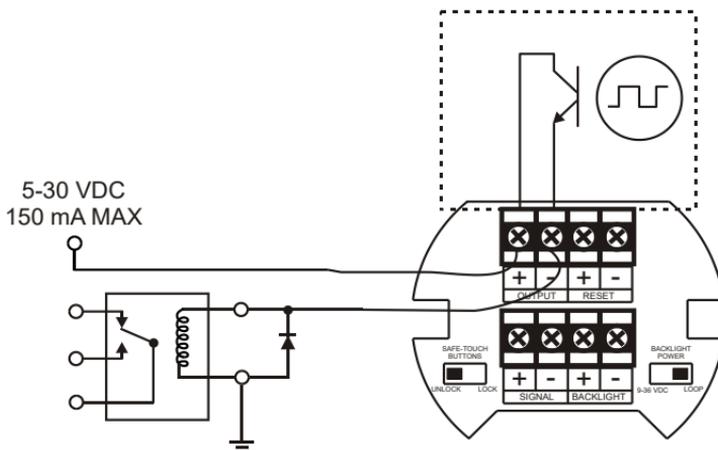

Figure 7. Output Connections

SETUP AND PROGRAMMING

There is **no need to recalibrate** the meter for milliamps when first received from the factory.

The meter is ***factory calibrated*** for milliamps prior to shipment. The calibration equipment is traceable to NIST standards.

Overview

Setup and programming are done through the infrared through-glass buttons, or using the mechanical buttons when uncovered. There are two slide switches located on the connector board. One is used to select backlight power (if equipped) and the other is to lock or unlock the through-glass buttons.

After all connections have been completed and verified, connect the ribbon cable to the display module, fasten the display module to the base, install enclosure cover, and then apply power.

Through-Glass Buttons

The Tek-LCD 7800B-0L1 is equipped with four sensors that operate as through-glass buttons so that it can be programmed and operated without removing the cover (and exposing the electronics) in a hazardous area. These buttons can be disabled for security by selecting the LOCK setting on the SAFE-TOUCH BUTTONS switch located on the connector board in the base of the enclosure.

Through-Glass Button Operation

To actuate a button, press and remove one finger to the glass directly over the marked button area. Remove finger to at least 4 inches away from the glass in between button activations. Through-glass and mechanical buttons may be held to cycle through menus or digits in place of repeatedly pushing a button.

The sensors are disabled when a mechanical button is pressed and will automatically be re-enabled after 60 seconds of inactivity.

Through-Glass Button Tips and Troubleshooting

The through-glass buttons are designed to filter normal levels of ambient interference and to protect against false triggering, however it is recommended that the through-glass buttons be turned off (slide SAFE-TOUCH BUTTONS switch to OFF) if there is an infrared interference source in line-of-sight to the display or if the buttons are not needed.

Through-Glass Button Tips:

- To the extent possible, install the display facing away from sunlight, windows, reflective objects and any sources of infrared interference.
- Keep the glass window clean.
- Tighten the cover securely.
- Use a password to prevent tampering.
- If the cover has not been installed and secured tightly, it may take a moment for the through-glass buttons to properly self-calibrate when the cover is tightened.

⚠ IMPORTANT	Through-glass buttons will not work if two or more buttons are detected as being pressed simultaneously. As a result, be careful to avoid triggering multiple buttons or reaching across one button location to press another.

Buttons and Display

Button Symbol	Description
MENU	**Menu**
RESET ▶	**Right arrow/Reset**
DISPLAY ▲	**Up arrow/Display**
ENTER	**Enter**

Symbol	Status
100% ... 0%	Tank Level Indicator

Menu Button

- Press the **Menu** button to enter Programming Mode.
- Press the **Menu** button during Programming Mode to return to the previous menu selections.
- Hold the **Menu** button for 1.5 seconds at any time to exit Programming Mode and return to *Run Mode*.
- Press and hold the **Menu** button for 3 seconds to access the *Advanced Features* of the meter.

Right / Reset Button

- Press the Right arrow button to reset the maximum or minimum value while it is being displayed (see **Up / Display Button** below).
- Press the **Right** arrow button to move to the next digit or decimal position during programming.
- Press **Right** to go backward through most selection menus.

Up / Display Button

- Press Display when in Run Mode to cycle through displaying the maximum value, minimum value, and the loop input value in mA. The display will time out in 12 seconds. Press Display again to resume normal lower display operation (lower display will read RESUME).
- Press the **Up** arrow button to scroll forward through the menus, decimal point, or to increment the value of a digit.

Enter Button

- Press the **Enter** button to access a menu or to accept a setting.
- Press **Enter** to acknowledge alarm (if enabled).

Main Menu

The main menu consists of the most commonly used functions: *Setup, Advanced,* and *Password.*

Press **MENU** button to enter *Programming Mode* then press the **Up Arrow** button to scroll through the main menu.
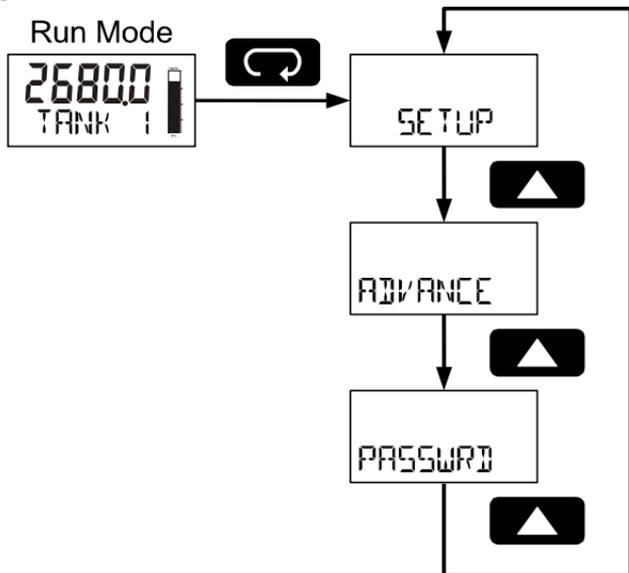

Run Mode

Hold **MENU**, at any time, to exit and return to *Run Mode*. Changes made to settings prior to pressing **ENTER** are not saved.

Press the **MENU** button during *Programming Mode* to return to return to the previous menu selections.

Changes to the settings are saved to memory only after pressing **ENTER**.

The display moves to the next menu every time a setting is accepted by pressing **ENTER**.

Setting Up the Meter (SETUP)

The *Setup* menu is used to select:

1. Engineering unit's decimal location
2. Engineering units display scale
3. Tank indicator full and empty values
4. Bottom display selection

Press the **ENTER** button to access any menu or press **UP** arrow button to scroll through choices.

Hold **MENU**, at any time, to exit and return to Run Mode. Changes made to settings prior to pressing **ENTER** are not saved.

Press the **MENU** button during Programming Mode to return to return to the previous menu selections.
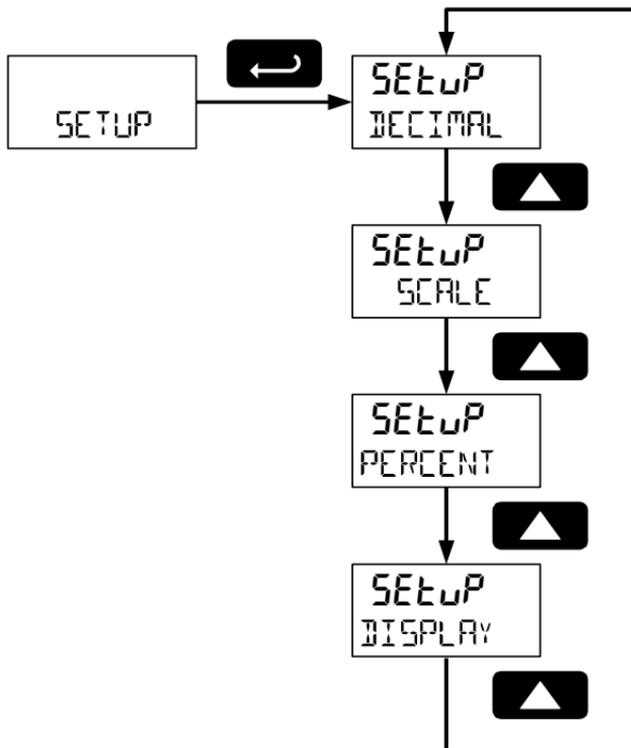

Setting Numeric Values

The numeric values are set using the **RIGHT** and **UP** arrow buttons. Press **RIGHT** arrow to select next digit and **UP** arrow to increment digit.

The digit being changed blinks.

Press the **ENTER** button, at any time, to accept a setting.

Hold **MENU**, at any time, to exit and return to Run Mode. Changes made to settings prior to pressing **ENTER** are not saved.

Press the **MENU** button during Programming Mode to return to return to the previous menu selections.

Select Next Digit   Increment Digit   Accept Setting
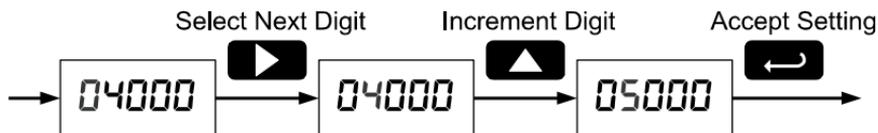

Note: The currently selected digit will blink. Pressing the Right Arrow button will select the next digit, causing it to blink.

Setting the Level Decimal Point (DECIMAL)

Decimal point may be set with up to four decimal places or with no decimal point.

Pressing the **Right** arrow moves the decimal point one place to the right and pressing the **Up** arrow moves the decimal point one place to the left.

Select Decimal Point   Accept Setting
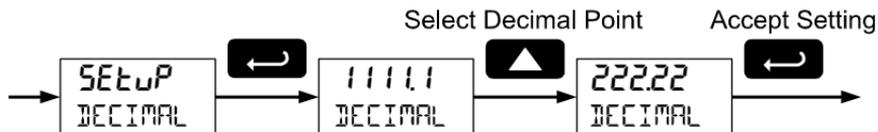

Main Menu Display Functions & Messages

The meter displays various functions and messages during setup, programming, and operation. The following table shows the main menu functions and messages in the order they appear in the menu.

Display	Parameter	Action/Setting
SETUP	*Setup*	Enter *Setup* menu
DECIMAL	*Decimal Point*	Enter the decimal point location
SCALE	*Scale*	Enter the *Scale* menu for engineering units
INPUT 1	*Input 1*	Set input 1 value in mA
DSPLY 1	*Display 1*	Set display 1 engineering units
INPUT 2	*Input 2*	Set input 2 value in mA
DSPLY 2	*Display 2*	Set display 2 engineering units
SAVE ?	*Save*	Save entered scale parameters
SPN ERR	*Span Error*	Scale point 1 and 2 span error
PERCENT	*Percent*	Scale the tank indicator full and empty values
0 PCT	*0 Percent*	Set the tank empty value
100 PCT	*100 Percent*	Set the tank full value
DISPLAY	*Display*	Enter *Bottom Display* menu
TAG	*Tag*	Display a custom unit or tag
VOLUME	*Volume*	Display volume
VOL+TAG	*Volume + Tag*	Display volume and custom tag
PCT HT	*Percent Height*	Display percent height
PCT+TAG	*Percent Height + Tag*	Display percent height and custom tag
OFF	*Off*	Disable bottom display
ADVANCE	*Advanced*	Advanced Features Menu (See Advanced Features Menu on page 30)
PASSWRD	*Password*	Enter the *Password* menu
UNLOCKD	*Unlocked*	Program password to lock meter
LOCKED	*Locked*	Enter password to unlock meter

For instructions on how to program numeric values, see Setting Numeric Values on page 22.

Scaling the Meter (SCALE)

The 4-20 mA input can be scaled to display the process in engineering units. To scale the meter, enter the value in milliamps (mA) for input 1, and then the corresponding engineering units display value. Do the same for input 2.

After entering the display 2 value, confirm the new scale by pressing **ENTER** at the *Save* menu.

A signal source is not needed to scale the meter; simply program the inputs and corresponding display values.

Press **ENTER** to access menu or accept sttings.

Press **UP** to scroll menu and to incredment digit values.

Press **RIGHT** to select next digit.

Press **MENU** to go back to previous menu, or hold to exit at any time.

Save

Back to Input 1 Parameter

Exit Without Saving
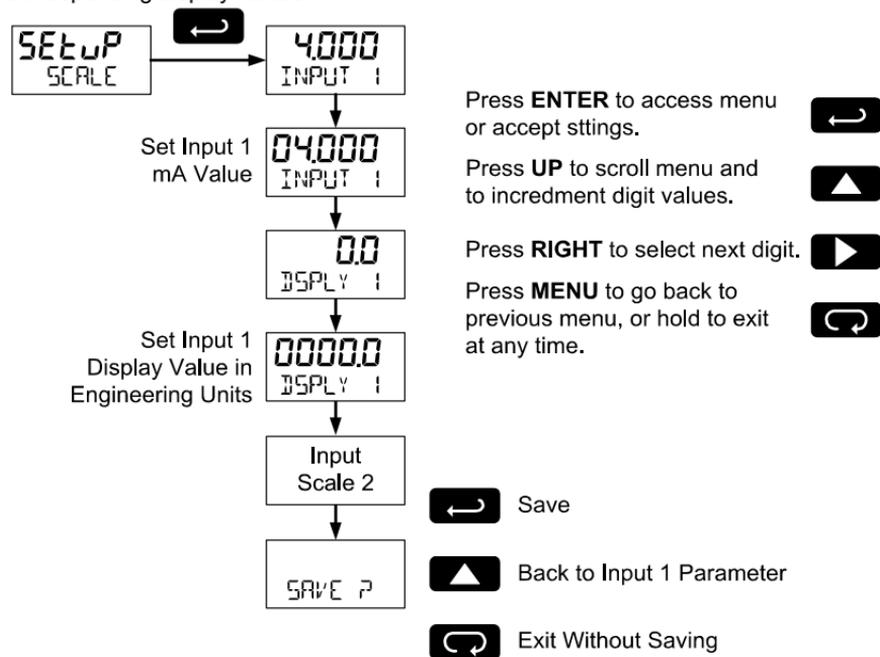

Figure 8. Scale Menu

For instructions on using multipoint scaling, see Level Input Multipoint Linearization (MULTIPT) on page 37.

For instructions on how to program numeric values see Setting Numeric Values, page 22.

Minimum Input Span

The minimum input span is the minimum difference between input 1 and input 2 signals required to complete the calibration or scaling of the meter. The minimum span is 0.10 mA.

Scale Error Message (SPN ERR)

If the minimum span is not maintained, the meter will show a span error (SPN ERR) and revert to input 2, allowing the appropriate input signals to be applied.

Scaling the Tank Level Indicator (PERCENT)

The display includes a 20-segment tank level indicator. This menu sets full and empty values, in engineering units, for the tank level indicator.

This value may differ from the 20 mA full-scale and 4 mA empty-scale values programmed in the *Scale* menu. This is ideal for level transmitters that output less than 20 mA at the maximum height of the tank or pit or more than 4 mA at the minimum height.

As an example, when using a level transmitter that outputs 20 mA at 25 meters, the tank height indicator may be set for a maximum of 10 meters. When the meter reaches 10 meters on the display, the tank height indicator will show full, even though the input is not 20 mA.

Configuring the Display (𝐃𝐈𝐒𝐏𝐋𝐀𝐲)

The lower (𝐁𝐎𝐓𝐓𝐎𝐌) display may be configured to display a custom tag (𝐓𝐀𝐆), volume (𝐕𝐎𝐋𝐔𝐌𝐄), volume and tag (𝐕𝐎𝐋÷𝐓𝐀𝐆), percent of full height (𝐏𝐂𝐓 𝐇𝐓), or percent of full height and tag (𝐏𝐂𝐓÷𝐓𝐀𝐆), or be blank (𝐎𝐅𝐅).

A custom tag may be up to seven alphanumeric characters programmed for identification (e.g. 𝐓𝐀𝐍𝐊 𝟑) or for engineering units (e.g. 𝐆𝐀𝐋𝐋𝐎𝐍𝐒).

Volume is a separate, second scale of the input process variable. This is configured in Volume Display Scaling (𝐕𝐎𝐋𝐒𝐂𝐀𝐋) on page 34.

Percent full height shows the percent full of the tank height level indicator programmed in the Scaling the Tank Level Indicator (𝐏𝐄𝐑𝐂𝐄𝐍𝐓) menu, on page 25.

The tank level indicator (𝐆𝐑𝐀𝐏𝐇) may also be turned on or off from the display menu.

Setting the TAG (TAG)

Any bottom display setting that includes a tag will require the tag to be entered.

```

Setting Up the Password (PASSWRD)

The *Password* menu is used to program a five-digit password to prevent unauthorized changes to the programmed parameter settings. A password protected meter will display LOCKED when the **MENU** button is pressed.

Locking the Meter

Enter the *Password* menu and program a five-digit password.

For instructions on how to program numeric values see Setting Numeric Values, page 22.

PASSWRD → 0 1234 → LOCKED → Run Mode

Program Password

Record the password for future reference. If appropriate, it may be recorded in the space provided.

Model:	
Serial Number:	
Password:	__ __ __ __ __

Making Changes to a Password Protected Meter

If the meter is password protected, the meter will display the message LOCKED when the Menu button is pressed. Press the Enter button while the message is being displayed and enter the correct password to gain access to the menu. After exiting the programming mode, the meter returns to its password protected condition.

TANK 1

LOCKED → 0 1234 → SETUP
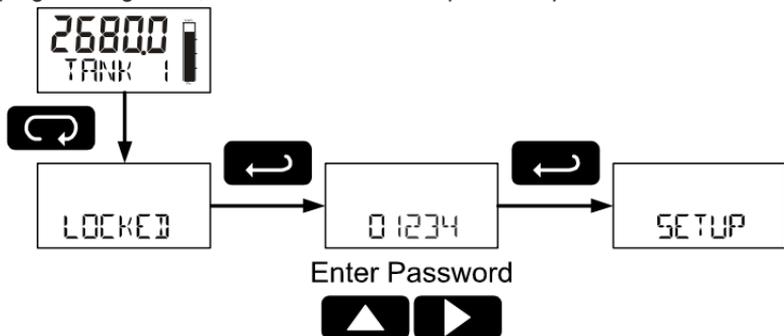

Enter Password

Disabling Password Protection

To disable the password protection, access the *Password* menu and enter the correct password, as shown below.

Enter Password

Run Mode
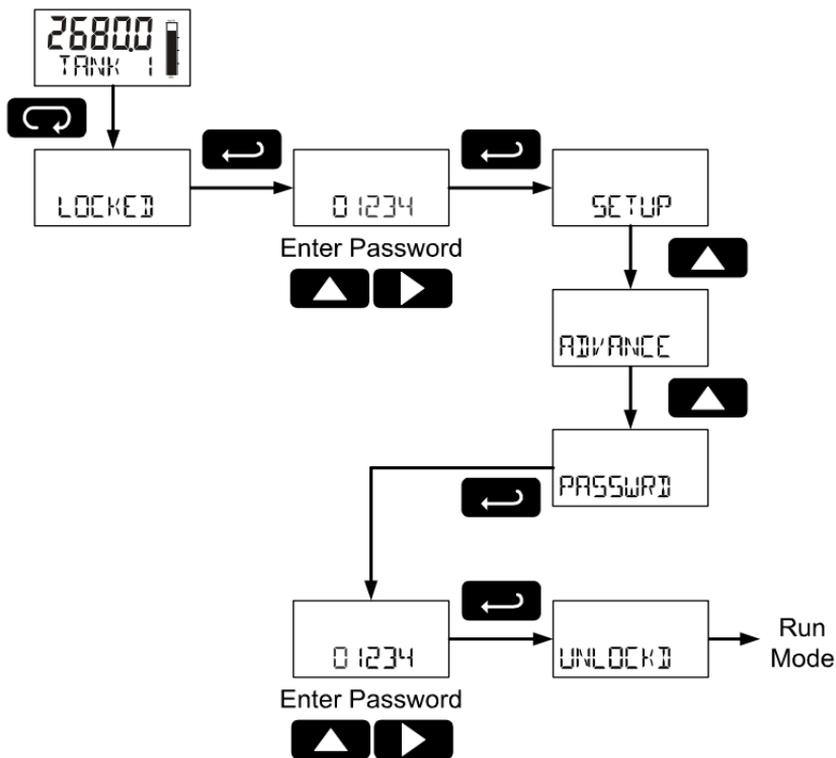

If the correct five-digit password is entered, the meter displays the message `UNLOCKD` (*unlocked*) and the protection is disabled until a new password is programmed.

If the password entered is incorrect, the meter displays the message `LOCKED` and returns to Run Mode. To try again, repeat the above procedure.

Did you forget the password?

The password may be disabled by entering a master password. If you are authorized to make changes, enter the master password 50865 to unlock the meter.

Advanced Features Menu (ADVANCE)

To simplify the setup process, functions not needed for most applications are located in the *Advanced Features Menu*. Access the *Advanced Features Menu* by pressing **ENTER** at the ADVANCE menu in the Main Menu defined on page **20**.

The *Advanced Features Menu* is used to select:

1. Open collector output configuration (OUTPUT)
2. Input filter (FILTER)
3. Volume display scale (VOLSCAL)
4. Live signal level display calibration (LVL CAL)
5. Internal Calibration (ICAL)
6. Multipoint linearization for level (MULTIPT)
7. Meter system information display (INFO)

FILTER	*Filter*	Set noise filter
LO	*Filter Low*	Set noise filter to low setting
mEd	*Filter Medium*	Set noise filter to medium setting
HI	*Filter High*	Set noise filter to high setting
OFF	*Filter Off*	Disable noise filter
VOLSCAL	*Volume Scale*	Scale the volume display
VOL DECIMAL	*Volume Decimal*	Set the decimal position for volume scaling
NO PTS	*Number of Points*	Set the number of points for volume scaling
INPUT 1	*Input 1*	Set volume input 1 on the level display
DSPLY 1	*Display 1*	Set volume display 1
INPUT 2	*Input 2*	Set volume input 2 on the level display
DSPLY 2	*Display 2*	Set volume display 2
SAVE ?	*Save*	Save entered volume scale parameters
LVL CAL	*Level Calibration*	Calibrate the level display
INPUT 1	*Input 1*	Calibrate input 1 value
DSPLY 1	*Display 1*	Set display 1 feet and inches
INPUT 2	*Input 2*	Calibrate input 2 value
DSPLY 2	*Display 2*	Set display 2 feet and inches

Display	Parameter	Action/Setting
SAVE ?	*Save*	Save entered calibration parameters
ICAL	*Internal Calibration*	Enter internal reference calibration
4.000	*4.000 mA*	Calibrate input at 4 mA
20.000	*20.000 mA*	Calibrate input at 20 mA
Error SPAN	*Error Span*	Error with calibration point 1 and 2 span
MULTIPT	*Multipoint*	Set level display multipoint linearization
DISABLE	*Disable*	Disable multipoint linearization
ENABLE	*Enable*	Enable multipoint linearization
INFO	*Meter Information*	Show software number and version, or reset to factory defaults
SOFt	*Software*	Software number
UEr	*Software Version*	Software version
DFALTS?	*Reset Defaults*	Restore factory default parameter settings

Alarm Output (OUTPUT)

The Tek-LCD 7800B-0L1 is equipped with an NPN open collector output that may be set up for high or low alarm trip point based on the level display (LEVEL) or the volume scale (VOLUME). The output may be disabled by selecting OFF.

When the alarm is enabled for level and the alarm set point has been reached, the level display will flash, accompanied by the bottom display alternating between normal display and ALARM. A tank height indicator segment will flash at the level the alarm is set to while the level indicator is at or above the alarm point.

When the alarm is enabled for volume and the alarm set point has been reached, the bottom display will flash, alternating between its normal display and ALARM.

To set a high alarm, program the set point value to be greater than the reset point.

To set a low alarm, program the set point value to be less than the reset point.

To acknowledge an alarm, press the **ENTER** button once for acknowledge prompt and a second time to confirm. Acknowledging an alarm will turn off the alarm output and stop the display from flashing. The bottom display will continue to alternate between its normal display and ALARM until the alarm condition is cleared.

The alarm status will show on the display even if the output is not wired.
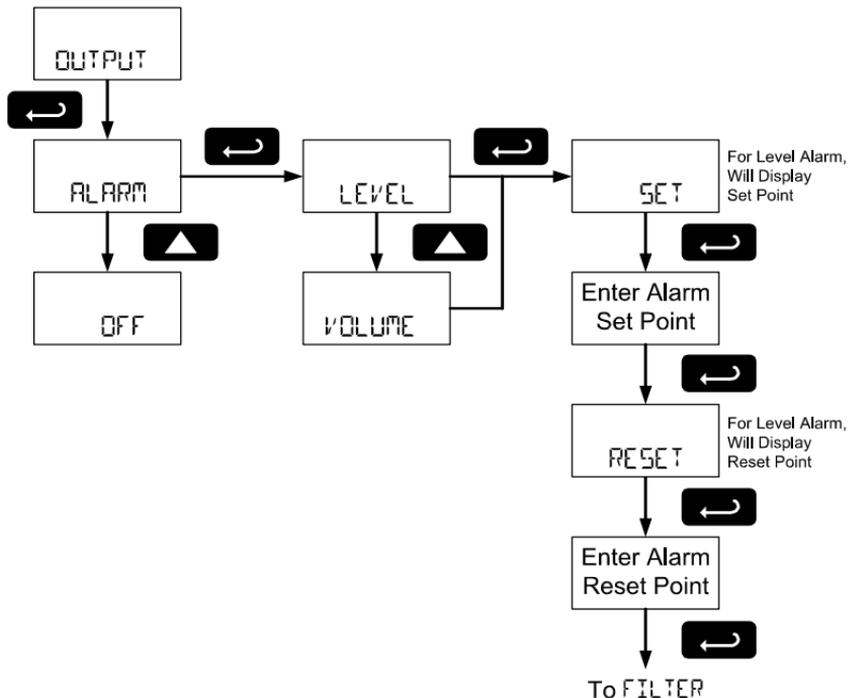

Input Signal Filter (FILTER)

The noise filter is available for unusually noisy signals that cause an unstable process variable display. The noise filter averages the input signal over a certain period. The filter level can be set to low (LO), medium (MED), high (HI), or off (OFF). The higher the filter setting, the longer the averaging time and so the longer the display may take to find its final value.

The filter contains a noise filter bypass feature so that while small variations in the signal will be filtered out, large, abrupt changes to the input signal are displayed immediately.

Volume Display Scaling (VOLSCAL)

Volume may be scaled as a function of the level display. It may use up to 32-point linearization. The multi-point linearization can be used to linearize the display for non-linear signals such as those from level transmitters used to measure volume in odd-shaped tanks.

To display the volume, select a bottom display including the volume display in the *Display* menu as shown in Configuring the Display (DISPLAY) on page 26.

To scale the volume display, select the decimal point location (0, 1, 2, 3, or 4), then enter the level in engineering units for input 1, the corresponding volume display value, and the same for input 2.

After entering the display 2 value, confirm the new volume scale by pressing **ENTER** at the *Save* menu.
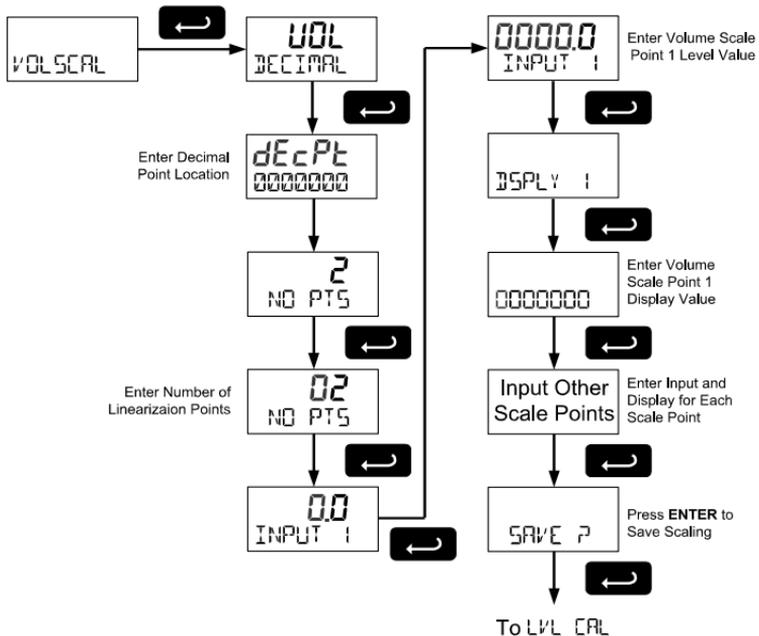

Level Input Live Signal Calibration (LVL CAL)

The meter can be calibrated using a current source instead of scaling. This process will override previously programmed scaling of the level display.

The use of a calibrated signal source is strongly recommended.

           Exit Programming
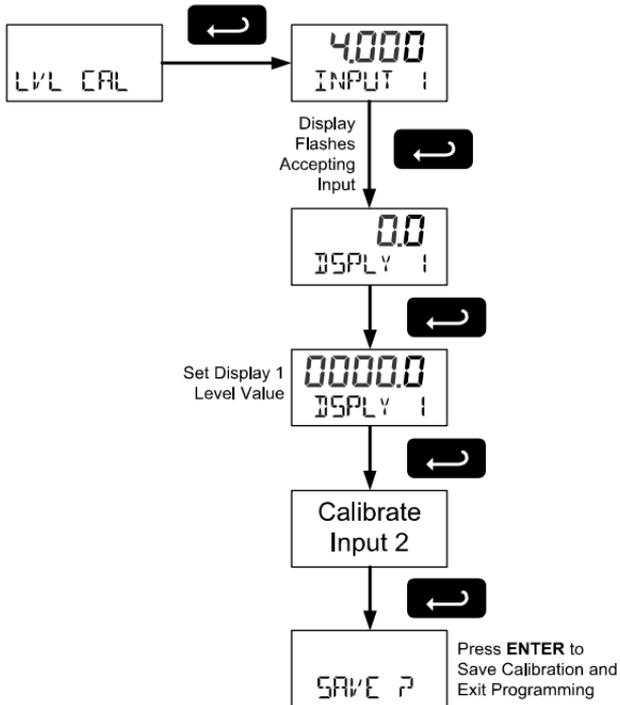

Internal Calibration (ICAL)

> There is **no need to recalibrate** the meter when first received from the factory. The meter is **factory calibrated** prior to shipment. The calibration equipment is traceable to NIST standards

The internal calibration is the meter's master calibration that makes scaling the meter without a signal source possible. Use of a calibrated signal source is necessary to perform an internal calibration of the meter. Check calibration of the meter at least every 12 months. Incorrect calibration will affect the ability of the meter to properly read, scale, and display the input.

> Notes:
>
> The signal source must have a full-scale accuracy of 0.002% or better between 4 and 20 mA in order to maintain the specified accuracy of the meter.
>
> Allow the meter to warm up for at least 15 minutes before performing the calibration procedure.

Press **MENU**, navigate to ADVANCE and press enter to access the *Advanced Features Menu*. Press the **UP** arrow button to scroll to the *Internal Calibration* menu (ICAL) and press **ENTER**.

The meter displays 4.000. Apply a 4.000 mA signal and press **ENTER**. The display flashes for a moment while the meter is accepting the signal.

After the signal is accepted, the meter displays 20.000. Apply a 20.000 mA signal and press **ENTER**. The display flashes for a moment while the meter is accepting the signal.

Calibration Error Message (Error SPAN)

An error message indicates that the calibration process was not successful. After the error message is displayed, the meter will revert to the 4.000 calibration menu. The error message might be caused by inadvertently leaving the signal at the previous level or not maintaining the minimum span. Press the **MENU** button to cancel the current calibration process if necessary.

Level Input Multipoint Linearization (MULTIPT)

This menu enables multipoint linearization for scaling and calibrating of the level display.

Setting MULTIPT to ENABLE will alter the level display *Scaling* (See Scaling the Meter on page 24) and *Level Calibration* (See Level Input Live Signal Calibration on page 35) menus to include *a Number of Points* (NO PTS) parameter before entering *Input 1*.

32-point linearization can be used to linearize the display for non-linear signals.

Information (INFO)

The *Information* menu shows the software identification number and version number. To determine the software version of a meter:

Go to the *Information* menu (INFO) and press **ENTER** button.

Continue pressing **ENTER** to scroll through the software release number and software version.

Following the information display, the meter will exit the *Advanced Features* menu and return to run mode.

OPERATION

Front Panel Buttons Operation

| Button Symbol	Description
↻ MENU	Press to Enter or Exit Programming Mode
RESET ▶	Used to Reset Maximum and Minimum Values
DISPLAY ▲	Press to Cycle Displaying Maximum Value, Minimum Value, and Input Current in mA Press to Resume Run Mode in Lower Display
↵ ENTER	Press to Acknowledge Alarm (if Enabled)

Display Maximum, Minimum, and Input Current

The maximum and minimum values and the measured input loop current may be displayed temporarily on the lower display. To display these values, press the **DISPLAY** button. The meter will display the word MAXIMUM on the bottom display and the maximum value reached (since the last maximum reset) on the top display. Press the **DISPLAY** button again and the meter will display the word MINIMUM on the bottom display and the minimum value reached on the top display. Pressing the **RESET** button while either of these values is displayed will reset that value to the current display value.

Press the **DISPLAY** button a third time and the meter will display LOOP MA on the bottom display and the measured input current in milliamps (mA) on the top display. The current display will remain for 10 seconds and then the lower display will return to normal run mode as programmed in Configuring the Display (DISPLAY) on page 26. Press the **DISPLAY** button a fourth time to return to the normal operation. The meter will display RESUME followed by the run mode lower display.

Run Mode
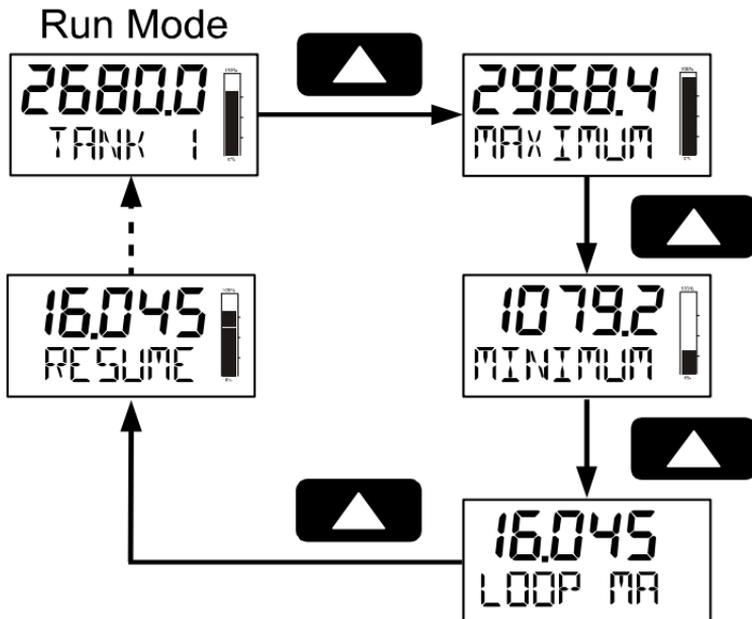

Reset Meter to Factory Defaults

When the parameters have been changed in a way that is difficult to determine what's happening, it might be better to start the setup process from the factory defaults.

Instructions to load factory defaults:

Enter the *Advanced Features Menu*.

Press and hold **Reset** button when `INFO` is shown. For information on navigating to the *Information* menu, refer to *Advanced Features Menu* on page 30.

Press **Enter** when `rESEt DFALTS?` prompt is shown

Note: If **Enter** is not pressed within three seconds, the prompt will stop flashing return to showing `INFO`.

Hold ▷ for
5 Seconds

`INFO` ▶ `DFALTS?` ↩ Factory Defaults Restored

TROUBLESHOOTING

Due to the many features and functions of the meter, it's possible that the setup of the meter does not agree with what an operator expects to see. If the meter is not working as expected, refer to the *Diagnostics* menu and consult the recommendations described below.

Troubleshooting Tips

Symptom	Check/Action
No display or faint display	Check input signal connections.
	Perform hard reset by shorting S+ and S- terminals.
Level display unsteady	Increase filter setting in *Advanced* menu.
Meter displays error message during calibration (Error SPAN)	Check signal connections.
	Verify minimum input span requirements
Level display flashes 99999 or -9999	Check input signal and scaling within range of 99999 and -9999
Volume display flashes 9999999 or -999999	Check level display within volume scale range of 9999999 and -999999.
Display response is too slow	Check filter setting to see if it can be lowered to LO or OFF.
If the display locks up or the meter does not respond at all	Perform hard reset by shorting S+ and S- terminals.
Backlight does not appear.	Backlight is intended for viewing assistance in dim lighting conditions. It may not be noticeable under good lighting conditions.
	Check connections are as shown in Figure 3 or Figure 4 on page 13.
Other symptoms not described above	Call Technical Support for assistance.
Through-glass buttons do not respond	Mechanical button was pushed, or through-glass slide switch is in lock position. The through-glass buttons will be re-enabled automatically 60 seconds after the last button push.
	If slide switch on connector board is in Lock position, switch to Unlock.
	Sunlight can interfere with the sensors. It is recommended to shield the window from sunlight while operating the buttons by standing so as to block direct sunlight.

EU DECLARATION OF CONFORMITY

Issued in accordance with ISO/IEC 17050-1:2004 and ATEX Directive 2014/34/EU.

We,

Precision Digital Corporation
233 South Street
Hopkinton, MA 01748 USA

as the manufacturer, declare under our sole responsibility that the product(s),

Model PD6800 Series Loop Powered Meter

to which this declaration relates, is in conformity with the European Union Directives shown below:

2014/35/EU	**Low Voltage Directive**
2014/34/EU	**ATEX Directive**
2014/30/EU	**EMC Directive**
2011/65/EU	**RoHS Directive**

This conformity is based on compliance with the application of harmonized or applicable technical standards and, when applicable or required, a European Union notified body certification.

Standards:

EN 55022:2007	EN 61000-6-2:2005	EN 60079-0:2009
EN 61000-6-4:2004	EN 60079-1:2007	EN 61010-1:2001
EN 60079-31:2009	EN 61326:2006	

The standards EN 55022:2007, EN 60079-0:2009, EN 60079-1:2007, EN 60079-31:2009, EN 61000-6-4:2004, EN 61010-1:2001, and EN 61326:2006 are no longer harmonized. The requirements of these standards have been checked against the harmonized standard EN 55022:2010, EN 60079-0:2012+A11:2013, EN 60079-1:2014, EN 60079-31:2014, EN 61000-6-4:2007+A1:2011, EN 61010-1:2010, and EN 61326:2013 and there were no major technical changes affecting the latest technical knowledge for the products listed above.
